Question Number	Evaluate the impact on *CCT* of an increase in the Chinese interest rate. You should use the information provided as well as your own knowledge of business. **Indicative content**	Mark
4 (c)	**AO1 = 3 marks AO2 = 3 marks** **AO3 = 3 marks AO4 = 3 marks** **AO1** • The cost of borrowing money • The rate of interest charged by the banks **AO2** • If *CCT* want to take out a loan to cover the cost of buying electric bicycles it will be more expensive if interest rates increase • People living in China will have to pay more for borrowing money and may have less disposable income to spend on touring the country **AO3** • Leading to an increase in fixed costs. This means more revenue will be required to be able to reach the break-even point • This could lead to a reduction in the demand for the bicycle tours lowering the revenue for *CCT* and increasing the risk of business failure **AO4** • However, if *CCT* strongly believe that taking out a loan will help them to expand then it might be worth taking the risk as the additional revenue can be used to cover the higher interest rates. • However, an increase in interest rates in China may not impact the foreign tourists that visit the country, and therefore this increase in rates may have little impact on the demand for *CCT*'s bicycle tours	**(12)**
